

# The Center for Civil Rights and Technology

Ensuring technology works for all of us

The Center for Civil Rights and Technology (Center) is a joint project of The Leadership Conference on Civil and Human Rights and The Leadership Conference Education Fund.

The Center, launched in September 2023, serves as a one-of-its-kind hub for advocacy, education, and research at the intersection of civil rights and technology policy. Our work is informed by an advisory council of civil society and academic leaders who specialize in how technology impacts people's rights.

## WHAT WE STAND FOR

### Fair AI and Data Privacy for All

Innovation without equity and fairness is not innovation. We are in one of the most significant industrial revolutions of our time with the rapid growth of AI systems which run on troves of personal data, but this progress cannot harm or leave our communities behind.

### An Accountable Tech Industry

People deserve to know that the information they are viewing online is honest and the technology they use is safe. When industry steps up to the plate, people can count on the technology they use to be safe and free from falsehoods and hate.

### Broadband Access for Everyone

Access to high quality, affordable internet is essential to attaining good-paying jobs, quality health care, education opportunities, and so many more critical goods and services. Everyone deserves quality and affordable broadband internet.

## WHAT WE DO

### Advocate

for technology policies and business practices that center fairness and safety

### Educate

key stakeholders and actors in government, business, and advocacy on how technology impacts people's rights

### Research

how technology impacts marginalized communities, our civil rights, and solutions to make it fair for all
